Masalah penyehatan lingkungan pemukiman khususnya pada pembuangan tinja merupakan salah satu dari berbagai masalah kesehatan yang perlu mendapatkan prioritas. Hasil wawancara oleh peneliti dengan melibatkan 5 responden. Kelima responden ini ternyata memiliki perilaku yang masih kurang dalam pemeliharaan. Masyarakat kurang peduli dengan kebersihan jamban mereka.

Tujuan penelitian ini untuk mengetahui perilaku masyarakat dalam pemeliharaan jamban. Desain penelitian yang digunakan adalah desain penelitian deskriptif. Teknik sampling yang digunakan adalah *Purposive Sampling* sampelnya berjumlah 53 responden dan teknik pengumpulan data dengan kuesioner.

Hasil penelitian ini menunjukkan bahwa perilaku masyarakat dalam pemeliharaan jamban (57%) atau 30 responden berperilaku buruk, sedangkan hampir setengahnya (43%) atau 23 responden berperilaku baik.

Bagi keluarga yang belum maksimal dalam memelihara serta memanfaatkan jamban diharapkan mencari informasi sebanyak-banyak di pusat kesehatan dalam memelihara dan memanfaatkan jamban. Bagi peneliti selanjutnya, disarankan untuk tidak berhenti melakukan penelitian tentang perilaku masyarakat dalam pemeliharaan jamban dan dengan populasi yang lebih luas supaya tercapai ketelitian penelitian optimal.

Kata Kunci : Perilaku, Masyarakat, Pemeliharaan Jamban

ABSTRACT
**THE BEHAVIOR OF SOCIETY IN THE WATER CLOSET'S MAINTENANCE AND
USE IN KRAJAN, NGRAYUN VILLAGE, NGRAYUN DISTRICT, PONOROGO
REGENCY**

(In Krajan, Ngrayun Village, Ngrayun District, Ponorogo Regency)

Sanitation issues, especially on excreta disposal is one of the many health problems that need to be prioritized. Researchers involving 5 respondents. The fifth respondent is proved to have behavior that is still lacking in the maintenance and use of water closet. They are less concerned with their water closet hygiene, as for of five respondents did not flush the dirt after a bowel movement because of the limitations of water, as well as in the maintenance of their own water closet hygiene is poor, for example in the space around the water closet.

The purpose this study is to know the behavior of the society in the maintenance and use of water closet. The research design used is descriptive research. Sampling technique that used is purposive sampling and the samples that used are 53 respondents. The questionnaire is used in the data collection techniques.

The results of this study indicate that the behavior of the community in the maintenance of water closet maintenance is (57%) or 30 respondents behave badly, while almost half (43%) or 23 respondents are well behaved. And the use of water closet is (53%) or 28 respondents well behaved, while almost half (47%) or 25 respondents behave badly.

For families who have not been maintained and used the water closed maximally are expected to look for information as much as possible in the health centers in maintaining and utilizing the water closet. For further research, it is advisable not to stop doing research on people's behavior in the maintenance and use of water closet and the wider population in order to achieve optimal accuracy study.
